Basic Fuchsia Care

- Fuchsias like loose, rich soil that allows easy root penetration and good drainage.
- Allow soil to dry slightly between watering's to so that the roots can breathe.
- Fuchsias are heavy feeders. Use a balanced fertilizer. Never fertilize a dry plant.
- Pinching the growing tips early in the season will create bushy plants and an abundance of blooms. Remove the spent blooms and seed pods to extend the blooming period.
- Practice good hygiene by removing spent blooms, fallen leaves and seed pods to allow adequate air circulation. Any disease or pest should be treated promptly.
- Except for very pale or white fuchsias, most varieties enjoy lots of morning sun.
- To winter fuchsias, after the first light frost, remove all leaves and cut plants back to 4 – 8 inches. Keep cool for the winter and never let them completely dry out or freeze. In the spring, move into bright light, more warmth and increase watering.
- Dozens of fuchsias are hardy in our climate when planted in the ground as a perennial. In the fall they may need to be mulched, especially in the first year after planting. Leave dead wood and don't prune back until growth starts in the spring.

You are cordially invited
to attend our next meeting.

Sno-King Fuchsia Society meets at **7:00 PM** on the **first Tuesday** of each month (except December and January) at:
Lynnwood Fire Station #14
18800 68th Ave W
Lynnwood WA

Directions: Head West on 196th St. Go 2 lights West of Hwy 99 and take a right (North) on 68th Ave W. Go roughly a half mile to the 4 way stop sign. Fire station will be on your left. Go through stop sign & turn into 2nd fire station entrance. Please Do Not park in front of fire station garage (we do not want to block any emergency vehicles). Look for "Sno-King Fuchsia Society" meeting signs. We meet in the room that faces 68th St.

Hope to see you there!
